

6. (Amended) A machine-readable medium having instructions stored thereon to implement an electronic commerce World Wide Web page, the sequences of instructions, when executed by one or more processors, cause one or more electronic systems to: provide access to a set of products available for electronic ordering by a user; monitor products ordered by the user; and provide, automatically, in response to subsequent accesses by the user a list of products previously ordered by the user.

11. (Amended) An apparatus comprising:  
means for providing access to a set of products available for electronic ordering by a user;  
means for monitoring products ordered by the user; and  
means for providing, automatically, in response to subsequent accesses by the user a list of products previously ordered by the user.

16. (Amended) A networked server device to provide information related to products available for ordering by a user of a client device coupled to the server, the server device to monitor products ordered by users that access the server device and to record products ordered by the users, wherein the server device provides one or more individual users, in response to subsequent accesses by the one or more individual users, with a list of products previously ordered by the respective users.
